1. Problem and user

Clinic coordinators and partner-clinic staff need one endpoint that answers a message with a grounded FAQ answer, a live logistics lookup, or safe generic triage advice.
Today that logic is split across three separate Week 6-9 labs.

2. Path chosen and why

AfyaPlus Module 4 Capstone.
This repo already has real, tested Week 6/8/9/10 artefacts to integrate rather than invent from scratch (see skill_matrix.md).

3. Architecture

```
client -> services/triage/app.py (auth + rate limit)
       -> agents/router.py
            -> agents/tools/logistics.py (MCP tool, stub mode)
            -> services/triage/rag.py (grounded FAQ lookup)
See docs/architecture.md for the full diagram.
```

4. Skill coverage

```
API/agent path -- Week 6 (auth.py, rate_limit.py)
MCP tool + pin -- Week 8 (logistics_mcp_versioned.py, pin.json)
Grounded lookup -- Week 9 (knowledge/ors_faq.md corpus pin)
Security hygiene -- Week 9 (redact.py, security smoke)
Eval -- Week 11 (evals/golden.jsonl, pytest pyramid)
```

5. Live demo

```
GET /health -> 200
POST /triage with no token -> 401
POST /token -> a real JWT
POST /triage "track delivery" -> a real check_stock MCP result
POST /triage "child needs ors" -> grounded ORS FAQ answer
See docs/demo_script.sh and docs/demo_transcript.txt.
```

6. Testing evidence

```
pytest -q: 16 passed, 1 deselected
tests/test_security_smoke.py: env not tracked, no live key,
  a real redaction test (email stripped)
evals/run_eval.py: golden-set score 3/3 = 1.00
perf_stub.json: measured p95 over 10 /health calls
```

7. Security and compliance choices

```
Bearer-token auth + per-user rate limiting (Week 6)
redact() strips bearer tokens, phone numbers, M-Pesa codes,
  Kenyan IDs, and email addresses before any log line
.env gitignored and verified untracked by a real test
```

8. Cost table

```
Stub tests: 0 calls, $0
Thursday demo: 0 calls, $0
No live-model code path exists in this build --
model_id is stub-local-router-v1, not a hosted model.
```

9. What works vs deferred

```
Works: full MWP in stub mode end to end (auth, RAG, MCP tool,
  pins, security smoke, eval, fixture)
Deferred: Week 10 catalog-mismatch lane, any live model call,
  real CI/cloud execution beyond this repo's own GitHub Actions
```

10. Process

Feature branches + conventional commits per lesson day
A real PR reviewed and merged (see review_log.md for the link)
Next step: Week 12 Monday live demo
